

Security Operation Center & SecuTex

CHT Security SOC

- Detect threats from endpoints, networks & clouds to do multi-dimensional analysis and scrutinize unknown attacks
- Keep all the evidence for digital forensics to enhance response capability
- Provide comprehensive threat intelligence for joint defense and emergency response

SecuTex Network Protection

- Proactive defense to monitor network status & alert enterprises for malicious cyber activities
- Deep analysis & early warning of unknown threats via machine learning
- Flexible log access and retrieval to target & investigate insider threats
- Comprehensive first-hand domestic and overseas threat intelligence from backbone and partnership

About CHT Security

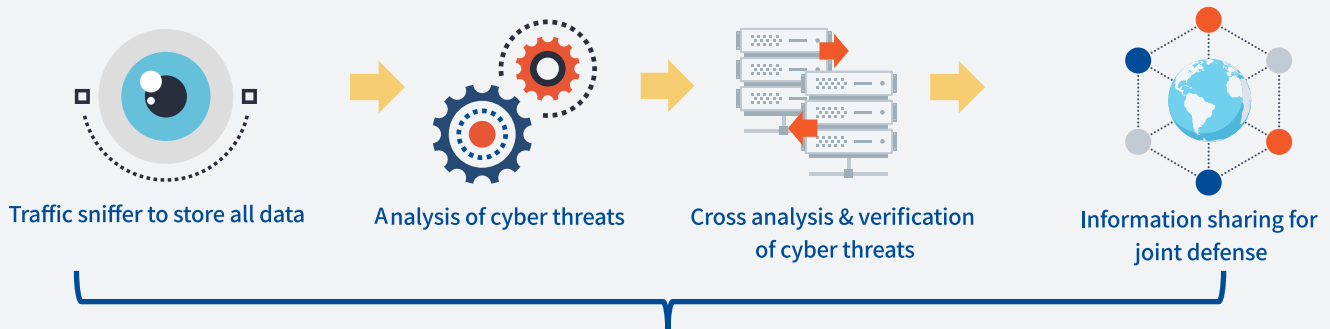

Based on years of experiences in cyber defense practices, CHT Security is the leading cybersecurity solution provider in Taiwan. Our team specializes in leading edge managed security services, NDR/EDR services, technical consulting and digital identity technology and has already won several international certifications and prestigious awards worldwide. CHT Security has the own technology to develop and deliver security services prior to the incident (vulnerability assessment, penetration test, etc.), during the incident (managed SOC, DDoS protection, etc.) and post the incident (CERT, digital forensics, etc.) for governments and enterprises. CHT Security is a subsidiary company of Chunghwa Telecom, the largest ISP and one of the largest ICT providers in Taiwan. For more information, please visit www.chtsecurity.com.

ANALYZE BIG DATA FROM NETWORK GATEWAY TO INSPECT ALL CYBER THREATS

SecuTex Network Protection is designed with an automatic information sharing and analysis mechanism among several core modules of massive network traffic analysis, threat intelligence machine learning & prediction, malicious file restoration & analysis, and also the information security threat intelligence platform. The cutting-edge concepts of situation awareness, retrospective detection and intelligence-driven defense make the product the best choice for cyber threat detection.

SecuTex Network Protection

Core Value : Monitor, Analysis, Threat Intelligence, Joint Defense

PCAP Detector

Big data analysis of network traffic packets

Malware Sandbox

Security mechanism to execute untrusted programs

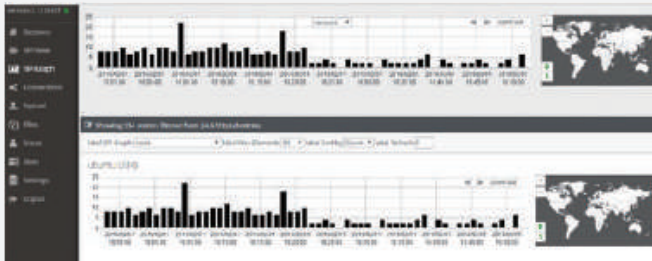

Threat Intelligence

Autonomic threat intelligence center

For **national security units, government agencies and financial institutions** that handle highly confidential issues

Chunghwa Telecom dominates over 70% network traffic in Taiwan and it's this advantage to enable SecuTex Network Protection to generate valuable threat intelligence. Via scanning all network traffic packets with efficiency, SecuTex Network Protection stores complete digital evidences malware sandbox mechanism and threat intelligence center to rapidly inspect all the cyber threats and to greatly reinforce the benefits of the security product.

SecuTex Network Protection delivers superior threat detection capability with its core engine to further analyze the malicious programs inside the traffic, C & C servers, trajectory of intrusion activities, and attack traffic. All the latest information about malicious domains and malicious level will be fed back to the threat intelligence center to keep enhancing the accuracy of the system, achieving ever-evolving joint defense capability. SecuTex Network Protection has already won several important reference sites

Highlights

1. Strengthen automatic mechanism of intelligence sharing & joint defense
2. Proactive defense via malicious programs analysis
3. Expandable malware analysis module to add on the latest and most effective detection methodologies
4. Advanced analysis visualization function
5. Standardized risk indicators for threat intelligence
6. Scalable storage architecture
