

CYBAVO VAULT

Secure Digital Asset Management

Institutional Wallet

Turn-key Solution

Secure Key Vault

By using the most robust industry standard cryptography, together with our unique encryption scheme based on a **shared risk model**, CYBAVO VAULT reduces the risk of your private keys being stolen to near zero.

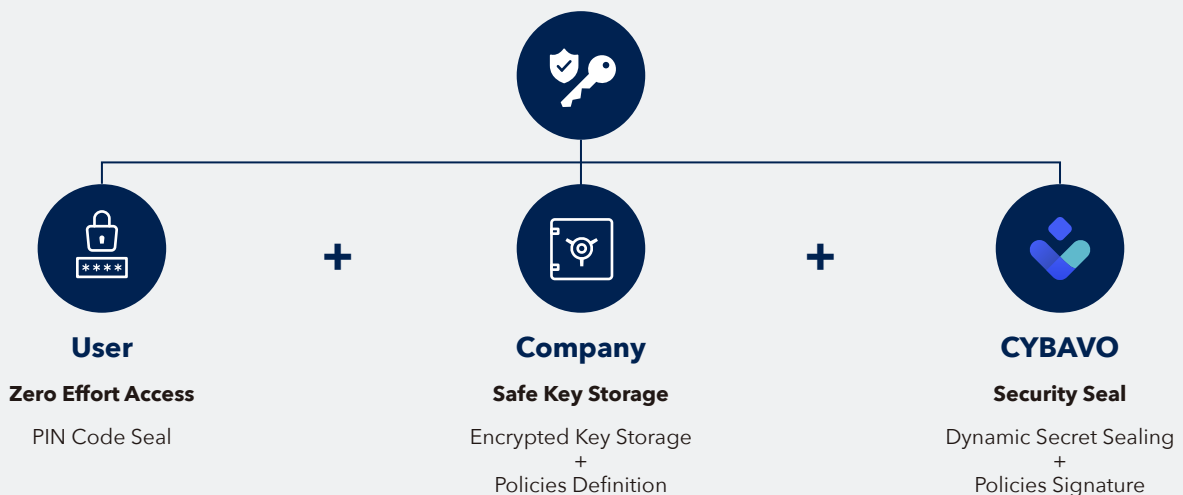

Full Stack Protection

CYBAVO VAULT is designed considering **security at every layer** of the system, from a hardened OS to a strict policy control. It also enforces security as a whole, eliminating the risk of security weaknesses due to the integration of different systems.

User Security

CYBAVO VAULT is **protected against the risk of user negligence** security breaches. Multi-factor Authentication is used for login and critical operations. Our authentication app runs an essential security assessment to ensure the mobile device integrity.

Shared risk model eliminates single point of failure

Triple-Lock Private Key Protection

Just like owning a corporate bank

Multi-user, Multi-wallet, Multi-currency

BTC	Japan BTC Account
ETH	Taiwan ETH Account
